Profile Summary

I am a solutions-driven backend engineer with 7 years of experience across finance, e-commerce, ERP, logistics, and digital agencies. I specialize in building scalable web and mobile applications and APIs, from planning through deployment and support. I have worked effectively in cross-functional teams, led developers, and consistently delivered results that meet and exceed business expectations.

Experience

JAN 2026 - PRESENT

[Gopaddi](#) – *Principal Software Engineer (Product Architect)*

Led the architecture and development of [Gopaddi Books](#), an AI-powered, scalable accounting platform. Designed a multi-entity system enabling consolidated and isolated financial reporting across subsidiaries. I built advanced financial reporting features, including Profit & Loss, Balance Sheet, and Cash Flow, with audit trails. Integrated AI-driven bank reconciliation and smart transaction matching to improve accuracy and reduce manual work. Implemented flexible Chart of Accounts onboarding and a secure role-based access control system.

JULY 2024 - DEC 2025

[Gopaddi](#) – *Software Engineer (Team Architect)*

Led a team of 6 engineers in architecting and developing a modular ERP platform to optimize enterprise workflows and internal operations. Designed system architecture and coordinated full-stack development across microservices and APIs to ensure scalability and maintainability.

Built and integrated core modules including real-time chat and calling (RTC), calendar scheduling system, CRM-style lead tracking, and secure file/document management. Delivered a high-performance platform that improved collaboration, workflow automation, and operational efficiency across client organizations.

JANUARY 2022 - JUNE 2024

[Kavlr UK, United Kingdom](#) – *Full-stack Engineer (Team lead)*

Led a team of developers building a fintech platform, overseeing architecture, task distribution, and delivery. Designed and implemented a secure Admin Dashboard and REST APIs for core system operations. Integrated Stripe, PayPal, and Evolve Cards for payment processing and built a No-Code Checkout system for fast merchant onboarding. Enforced secure coding practices and ensured scalable, reliable system architecture.

FROM MAY 2021 - MARCH 2023

Dellyman, Nigeria – *Full-stack Engineer*

At Dellyman, I developed delivery plugins for content management systems like WordPress and Ecwid, enabling customers to book deliveries for e-commerce orders directly from their websites using PHP. I translated Figma designs into responsive, user-friendly interfaces and worked closely with backend engineers to implement and consume API endpoints for Noshtrybe. I focused on ensuring a seamless user experience across web applications throughout my tenure.

FROM APRIL 2019 - MARCH 2021

Dsoftsolutions, Ikorodu – *Web designer*

Created and managed over 25 WordPress website projects, from procurement to commissioning, ensuring timely delivery and high-quality outcomes. I ensured client satisfaction with the website, which helped our client make money.

Education

Federal University of Technology, Akure, Nigeria – *B.Tech. (Cybersecurity)*

Skills

Laravel, Node.js, Typescript, React/Nextjs, Vue.js/Nuxtjs, Tailwind CSS, Git, Docker, Redis, RabbitMQ

Brands I have worked with:

Downtowngrill

Led the design and development of the official website for [Downtown Grill NG](#), optimizing performance, responsiveness, and user experience for a growing restaurant brand. Supported digital visibility, customer interaction, and online food ordering workflows across multiple business locations.

Tec-Ride

Served as Lead Developer at Tec-Ride, overseeing the end-to-end development of a smart mobility platform supporting ride booking, fleet operations, payment workflows, and scalable transportation services. Directed frontend and backend engineering, system architecture, API integrations, and performance optimization for web and mobile ecosystems.
